Meet compliance standards with Plex:
ISO 9001:2015

Plex Smart Manufacturing Platform Features & Benefits

Inventory Management

- Offset volatile material costs and increased inventory turns with door-to-door inventory management.

Manufacturing Execution and Quality Control

- Get the right material at the right time to account for production scheduling with the built-in material resource planning (MRP) engine.
- Error-proof quality results in lower costs that go right to your bottom line.
- Manage production with an innovative control panel that connects operators to everything they need to do their work and that digitally collects data about everything they produce.
- Overall equipment effectiveness (OEE) makes it easy to track uptime, production, and quality to measure and drive continuous improvement.
- Track scrap, flash and regrind with high accuracy that includes standard and actual cost accounting.

Responsive Supply Chain

- Create a more collaborative supply chain that is proactive instead of reactive.
- Minimize the effects of demand volatility on your businesses with just-in-time inventory and resources, proactive sales and operations planning.
- Gain end-to-end visibility from quote to order fulfillment with a flexible quoting system that provides accurate cost calculations.
- Instantly communicate with your customers and suppliers with built-in Electronic Data Interchange (EDI). EDI also allows you to automatically initiate business processes such as automatic shipment notifications (ASNs).
